Reasons for Allowance

Applicant's arguments, see Remarks, pages 4-10, filed 05/11/07, with respect to claims 1-7 have been fully considered and are persuasive. The objections, 112 2nd and 103 rejections of claims 1-7 have been withdrawn due to applicant's amendment and arguments.

The following is an examiner's statement of reasons for allowance: The examiner has found claims 1-7 to be unobvious over the prior art of record and therefore to be allowable over the prior art of record. The present invention relates to a method for producing a chitosan-containing salt having the function of lowering blood pressure, which comprises specific defined steps. The closest prior art document (Cho et al.) to this invention also disclose a method for producing a chitosan-containing salt. However, though both methods produce a chitosan salt, the process claimed in the instant invention is different and unobvious to that disclosed in the prior art document. For example, applicant sprays their chitosan onto salt particles, does not require a recrystallization and grinding steps, nor the evaporation of huge quantities of water. Moreover, a comparative experimental study indicates that applicant's process is much more economical than that of the prior art. As example, the energy cost in producing 300 kg of the chitosan-containing salt according to the instant inventive method is 2,995 won in Korean currency, which is at least 11 times lower than that of the prior art.
